University of Gaziantep, Department of ....
Student Name, Surname :
Duration 100 min.
Date/Time
Student Id No

1. Write a C++ program to implement algorithm
given below:
S1: Start
S2: Input an integer $n$
S3: Compute T defined by:

$$
T=\frac{n}{\sqrt{1}+\sqrt{2}+\sqrt{3}+\cdots+\sqrt{n}}
$$

S4: Output $\mathrm{T}^{2}$
S5: End
Write down the output of the algorithm for $n=5$ :
2. In geometry, a golden rectangle is a rectangle whose side lengths are in the golden ratio:

$$
\frac{\mathrm{a}+\mathrm{b}}{\mathrm{a}}=\frac{\mathrm{a}}{\mathrm{~b}}=\varphi
$$

where $\varphi$ is a constant and known as the golden number.

(a) Determine the numerical value of $\varphi$ analytically.
(b) Consider any golden rectangle.

Write a $\mathrm{C}_{++}$program to perform the followings:

- Read the value of a
- Calculate the value of $\mathbf{b}$ (from $b=a / \varphi$ )
- Output the area of the golden rectangle

3. Write a C++ program to input two integers M and N from keyboard and output sum of the positive even numbers between $M$ and $N$.
